

AN ARTERA COMPANY

Sewer Service Interruption Notice

Dear Resident,
Miller Pipeline has been contracted to repair the aging sewer system in your neighborhood. The repair involves inserting a pipe liner inside the existing sewer pipeline thereby eliminating the need for extensive disruption for long periods of time.

We will be working in your neighborhood on:

Between The Hours Of: _____ and

Please, during the time of the repairs on the scheduled workday, we ask that you do not use any water that would cause runoff into your sanitary sewer drains (including but not limited to your shower, washing machine, dishwasher, flushing toilets, etc.). If water is used during the sewer repair, sewage could back up into your home, or it could damage the pipe liner material during the installation process.

We also ask that you do not park any vehicles on the street on the date listed above. There will be limited access on the street throughout the scheduled workday day and normal traffic flow will resume once the work is completed.

The crews will be using a technique call cured in place pipe (CIPP) to minimize the need for invasive digging. On rare occasions, this method can result in a resin-like odor that can be detected at low levels. Take the following measures to keep odors out of your home or buisness:

Open Windows to allow fresh air to dissipate any odors.

Pour water into any drains each morning work is scheduled.

If your home is older and does not have drain traps, place a wet towel over floor drains on the day the work is scheduled.

If you detect odors inside your home or buisness that you believe are related to this work you need to call the project foreman.

DUE TO WEATHER CONDTIONS AND OTHER UNFORSEEN EVENTS, THIS SCHEDULE MAY CHANGE.

We apologize for any inconvenience you may experience while the improvements are being made to the sewer system. If you have any concerns or questions, you may contact **Jeramie Kessler, Project Foreman, 317-473-8928**

Thank you for your cooperation,
Jeramie Kessler
